PRE-SEED INVESTMENT PITCH DECK • SPECIALE INVEST

The Universal Bidirectional Sign Language Protocol

Sammy is a bidirectional sign language translation engine. Wait—before you think this is just another CSR or charity grant, it is not. It is high-margin enterprise software addressing a mandatory legal compliance crisis. We are building the universal standard for everywhere and anywhere, using airport departure gates as our commercial beachhead.

TARGET RAISE	VALUATION CAP	CORPORATE STRUCTURE	OPERATIONAL RUNWAY
$750,000 SAFE	$6,000,000 Post-Money	Delaware Parent + India R&D	48 Months (Indian DeepTech)

FIRST-PRINCIPLES PROBLEM

Why Existing AI & Text Architectures Fail Sign Language

Sign Language is not spoken English with hand gestures; it is an independent 3D visual-spatial language with its own distinct grammar, phonology, and syntax.

1. Why English Text Captions Fail (The Ava Benchmark)

Linguistic Failure

70%+

Prelingually Deaf Read English Below 4th-Grade Level

Who is Ava? Ava (ava.me) raised $20M+ selling live speech-to-text English captions to enterprises. While Ava proved companies will pay for accessibility, English subtitles fundamentally fail native deaf signers:

- Prelingual deaf travelers communicate in spatial 3D syntax; rapidly scrolling English text is illegible during emergency flight disruptions.
- **Zero Bidirectional Dialogue:** Text captions are strictly one-way. A deaf traveler cannot sign back to ask gate agents for help.

2. The Generative Video Dead-End (Sora, Runway)

DeepTech Dead-End

$0.10 / sec

Unsustainable Cloud GPU Streaming Burn

Statistical pixel diffusion models hallucinate finger counts, cause severe skeletal drift ($\Delta > 0.12$ bone length error), and exhibit 15+ second generation latency:

- Fingers merge, clip through faces, and destroy the precise spatial grammar required for semantic comprehension.
- Streaming multi-million-dollar cloud GPU clusters onto public airport gate screens makes unit economics impossible.

Linguistic Citation: Traxler (2000), J. Deaf Studies & Deaf Education • NIH / Gallaudet

SPECIALE INVEST

THE DEEPTECH ARCHITECTURE

BiSign-LLM: The Deterministic Two-Way Spatial Engine

Replacing statistical pixel hallucination with rigid spatial constraint solvers executing client-side with **$0.00 cloud GPU cost**.

Hearing → Deaf (Forward)

3D Kinematic Avatar

Δ = 0.000

Rigid Bone Length Invariance

Airlines or hospital staff speak naturally; Sammy parses the audio, generates continuous spatial tokens, and compiles them via continuous quaternion SLERP over a 280ms physiological co-articulation window into fluid 3D avatars.

Deaf → Hearing (Backward)

Spatial Vision Translation

< 150 ms

Continuous Real-Time Latency

Deaf user signs into any standard commodity webcam. Sammy's **Causal Spatial Memory Bank (M_t)** tracks 3D spatial bone coordinates and non-manual facial cues, translating signs back into natural spoken voice and text.

Edge Execution ($0 Cloud GPU)

Pure Software Margin

60 FPS

In-Browser WebGL / Wasm Execution

Runs directly on existing client hardware—10-year-old Intel Atom airport display chips, bank teller monitors, or iOS/Android devices. Marginal compute cost per sign is $0.00, unlocking 90%+ gross margins.

Architecture: WebGL / Three.js / WebAssembly (Zero Server GPU Inference)

ENGINEERING BENCHMARKS

Exponential over Incremental: Architectural Comparison

Why SAMMY is structurally defensible against Big Tech foundation models, text captioning tools, and legacy avatars.

ARCHITECTURAL DIMENSION	GENERATIVE VIDEO (SORA / RUNWAY)	TEXT CAPTIONS (AVA - SPEECH-TO-TEXT)	LEGACY 3D (SIGNALL / DEAFTAWK)	SAMMY (BISIGN KINEMATIC ENGINE)
Biomechanical Bone Rigidity	**Hallucinates (Δ > 0.12)**	**Not Applicable (Text)**	**Robotic / Stiff Keyframes**	**Exact Invariance (Δ = 0.000)**
Inference Latency	15,000 ms – 30,000 ms	800 ms – 1,500 ms	1,200 ms	< 150 ms (Real-Time 60 FPS)
Cloud GPU Cost / Minute	$6.00 / minute streaming	$0.01 / minute	$0.08 / minute server-side	$0.00 (100% Client-Side Edge)
Two-Way Bidirectional Dialogue	**No (One-way video only)**	**No (English text only)**	**No (One-way avatar only)**	**YES: Speech-to-Sign & Sign-to-Speech**
Enterprise Hardware CapEx	Requires High-End Server GPU	Zero (Software)	Custom specialized cameras	Zero (Integrates on existing displays)
14 CFR § 382 Federal Compliance	Non-compliant (Hallucinations)	Partial (Fails low-literacy signers)	Partial (Uncanny valley rejection)	100% Fully Compliant

COMMERCIAL BEACHHEAD

The High-Margin Beachhead: Airport Departure Gates

Driven by federal statutory compliance mandates, zero hardware CapEx, and pre-approved enterprise budgets.

The Regulatory Forcing Function: 14 CFR § 382.53

Beachhead SOM

$200M SOM

Airport Gate Beachhead (20,000 Global Gates × $10,000/yr SaaS)

Under the US Department of Transportation's **Air Carrier Access Act (14 CFR § 382.53)**, commercial airlines and airport operators face statutory six-figure federal fines if dynamic flight gate changes and emergency announcements are not visually accessible to deaf passengers.

- **Zero Hardware CapEx:** Deploys directly onto existing gate monitors and flight display systems (FIDS) via lightweight browser runtime.
- **Low Operational Liability:** Finite travel vocabulary (~250 operational phrases) with zero medical malpractice exposure.
- **Concentrated High ARR:** A single hub like Dallas/Fort Worth (168 gates) or Atlanta (192 gates) represents $1.6M – $1.9M in annual recurring revenue.

Pre-Approved Budgets: The Ava Precedent

Proven Enterprise Spend

Why we analyze Ava: Ava raised $20M+ selling English captioning to **Air France, UCLA, and corporate campuses**. This proves to investors that enterprises already have approved, recurring budgets specifically for Deaf accessibility.

- **The Unsolved Gap:** Every organization paying Ava today still has an unaddressed legal liability under 14 CFR § 382 for native signers who cannot read fast English captions.
- **No Budget Creation Needed:** We do not need to educate procurement departments on accessibility budgets; we capture their existing spend with the 3D sign language engine they are legally missing.
- **Immediate Expansion:** Airport Gates → Rail Terminals (Amtrak) → Hospital Triage → Bank Counters.

BUSINESS MODEL & GROWTH FLYWHEEL

The Dual Engines: $10K/Gate SaaS + $2/Month Consumer Mobile

Combining high-margin enterprise compliance ARR with mass consumer network effects across 70M+ deaf individuals globally.

Engine 1: B2B & B2B2C Enterprise SaaS

Cash Flow Engine

90%+

Software Gross Margins (Client-Side Edge Compute)

High-ACV enterprise compliance software sold to airlines, airport authorities, hospitals, and transit hubs:

- **Annual License:** $10,000 per departure gate / public terminal annually.
- **B2B2C Dynamics:** Enterprise pays the bill; thousands of daily deaf travelers and hearing staff use the bidirectional interface.
- **High Switching Costs:** Once integrated into airport FIDS and ground crew operations, Sammy becomes standard operational infrastructure.

Engine 2: B2C Mobile Direct Subscriptions

Grassroots Moat

$2.00 / mo

Mass-Market Accessible Smartphone Pricing

Over 70 million deaf individuals globally need everyday communication for ordering coffee, visiting retail stores, and talking to hearing peers:

- **Zero CAC Flywheel:** Travelers experience Sammy on airport monitors and download the smartphone app for personal use.
- **Unassailable Data Moat:** Everyday consumer signing interactions continuously feed our causal spatial memory bank, expanding our real-world linguistic edge.
- **Community Trust:** Transparent, affordable pricing cements deep cultural loyalty within Deaf associations worldwide.

Unit Economics: Edge Execution eliminates server streaming bills, enabling both enterprise scale and $2/mo pricing

PLATFORM HORIZON & MARKET SIZING

The Universal Standard: Everywhere & Anywhere

Capturing our **$200M airport gate beachhead** first, then scaling across a **$3.2B enterprise physical SAM** and a **$10.5B+ universal foundation TAM**.

Healthcare & Emergency

$1.2B SAM

< 30 sec

Instant Emergency Room Triage

Hospitals currently wait 45+ minutes for live video-relay interpreters during medical emergencies. Sammy enables instantaneous two-way bedside diagnosis with full HIPAA compliance and zero data leaks.

Civic, Banking & Retail

$1.4B SAM

100,000+

Target Countertop Terminals

Bank teller stations, government DMV offices, and drive-thru kiosks integrate Sammy's WebAssembly widget, making physical counter service accessible to every citizen without hiring specialized staff.

Video Calls & Mobile OS

$7.9B TAM

WebRTC SDK

Zoom / Teams / iOS / Android

Embedding Sammy directly into Zoom, Microsoft Teams, iOS, and Android. Any hearing participant talks normally, and any deaf attendee sees real-time signing on screen and signs back seamlessly.

SOM: $200M ARR (Airport Gate Beachhead: 20K gates @ $10K/yr) | **SAM: $3.2B ARR** (Transit, Hospitals & Banking Physical Desks) | **TAM: $10.5B+** (Universal Video SDKs + 70M Mobile Subscriptions)

SPECIALE PORTFOLIO SYNERGY

Parallel DNA: How SAMMY Fits Speciale Invest

Mirroring the rigorous engineering discipline of Speciale Invest's most successful deeptech investments.

Like Morphing Machines

Compute Agility

Edge Efficiency over Server GPU Burn

Just as Morphing Machines rethought parallel compute architectures out of IISc, SAMMY rejects multi-million-dollar cloud GPU clusters to execute deterministic spatial kinematics directly on edge display chips.

Like CynLr (Robotics)

Physics Moats

Spatial Kinematics over Guesswork

Just as CynLr solves robotic vision through physical convergence rather than statistical ML guesswork, SAMMY enforces rigid skeletal mechanics and quaternion SLERP over hallucinating pixel diffusion.

Like Protecto & StreamAlive

Enterprise Rails

Low-Latency Infrastructure

Like Protecto's compliance layer for GenAI and StreamAlive's low-latency interactive display software, SAMMY builds the critical regulatory plumbing for enterprise public transit.

FOUNDER & CAPITAL EFFICIENCY

Founder & The 4-Year Indian Runway Arbitrage

Single-founder technical focus operating at 1/5th Silicon Valley burn rate.

Founder Leadership & Technical Depth

Solo Founder

Iniyan Joseph

Founder & CEO

Full-Stack Spatial AI & Kinematics: Deep technical research spanning procedural 3D inverse kinematics, Stokoe phonology, and bidirectional translation neural pipelines.

Relentless 0-to-1 Execution: Independently designed, built, and shipped the operational 60 FPS WebGL 3D engine, skeletal parser, and live browser studio with zero outside capital.

- **Lean Engineering Expansion:** Pre-seed funds will be used to recruit 2-3 elite graphics and C++/WebAssembly engineers from premier Indian institutions (IIT/IISc/NIT).
- Uncompromising focus on low-level systems engineering rather than brittle API wrappers.

Capital Allocation: What $750K Unlocks

48 Months Runway

48 Months

Operational Runway Sustained in India

Rather than burning $50k+/month in Silicon Valley on cloud GPU clusters, our capital is concentrated purely on engineering defensibility:

- **Elite Graphics & Systems Team:** Sourcing 2-3 core systems engineers to optimize WebAssembly runtimes and embedded airport signage SDKs.
- **In-House Kinematic Lab:** Dedicated Manus Metaglove hardware to rapidly compile and expand our operational sign lexicon to 5,000+ signs.
- **Global Intellectual Property:** Filing PCT international patents covering deterministic skeletal compiling and SLERP co-articulation.
- **Enterprise Pilot Delivery:** Financing deployment and compliance testing across initial US and Indian commercial airport hubs.

Unit Economics: Edge Execution eliminates server GPU costs, extending pre-seed runway to 4 full years

THE INVESTMENT OPPORTUNITY

The Ask: Inviting Speciale Invest to Lead Our Pre-Seed

A category-defining DeepTech investment at the intersection of spatial AI, public transit infrastructure, and civil rights.

The Offering Structure

Deal Terms

- **Target Raise:** $750,000 (Directly in Speciale Invest's pre-seed lead sweet spot).
- **Instrument:** Standard Y Combinator Post-Money SAFE note.
- **Valuation Cap:** $6,000,000 Post-Money.
- **Position:** Inviting Speciale Invest to serve as the **Lead Institutional Investor**.
- **Corporate Vehicle:** Delaware C-Corp parent holding all IP, with Indian wholly-owned operational R&D subsidiary.

Next Steps & Immediate Diligence Access

Live Proof

We did not wait for funding to build the engine. Our live 3D procedural studio is operational right now for independent diligence:

- **Interactive 3D Studio Demo:** Launch 3D WebGL Engine
- **Founder Profile:** linkedin.com/in/iniyandrews
- **Official Email:** iniyandrews@gmail.com
- **Technical Readiness:** Ready for immediate partner-level technical diligence with Speciale's investment team.

"The best time to build this was yesterday. The second best time is right now."

LET'S BUILD THE GLOBAL STANDARD
